Woza is an applied *science* and engineering company.

Nothing starts from *zero*.

We develop proprietary technology for the hardest problems where industry meets the physical world.

Industry leaders license it. We build new companies on it.

01
Energy

02
Forests

03
Agriculture

04
Territory

01 Deployed

The next industrial capabilities are *already* here.

Powered by Woza. Proven in operation.

01	The grid that sees the storm coming.	Energy Iberdrola
02	Every asset. Every risk. One network.	Energy UFD, Grupo Naturgy
03	The ground becomes the proof.	Energy supply chain Moeve
04	A forest inventory that never stands still.	Forests HAZI
05	An entire territory. One operating system.	Territory Azpilur
06	The field becomes the forecast.	Agriculture Agrology
07	The whole agricultural picture.	Agriculture SIMA
08	A city that can steer its emissions.	Energy and cities EVE

Some of our most advanced work remains under NDA.

02 Ventures

Our technology becomes new *companies*.

Born at Woza. Built to stand on their own.

Energy

Predicterra

Intelligence for energy assets, risk and operations.

Agriculture

Hectareo

Land, production and risk. One operating system.

Forests

AboveForest

An entire forest. A digital twin down to the tree.

03 Technology

One *foundation*. Every deployment. Every company.

Proprietary software engines for the physical world, built from our own research and owned end to end. Four engines. Working as one.

01 Capture the signals.

Ark

Captures the data that describes a physical system.

02 Connect the pieces.

Orion

Fuses those signals into a unified model of assets, processes and constraints.

03 Anticipate. Act.

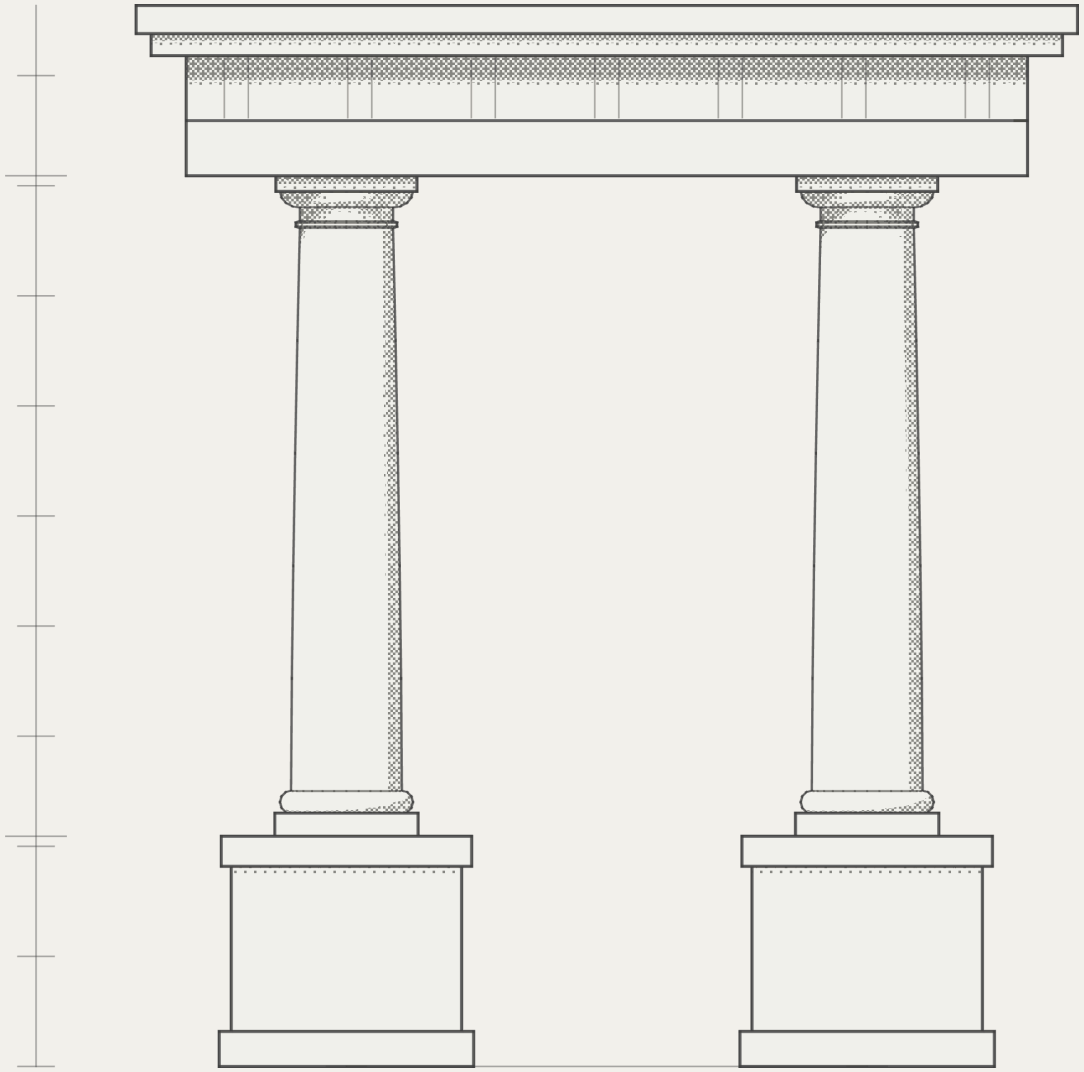

Zenith

Turns models into forecasts and forecasts into operational decisions.

04 See the whole.

Atlas

Brings the system into view, from individual assets to the relationships between them.

04 Research

Ahead of the *ask*.

Our research agenda. Industry's next capabilities.

Protocol	**ForestLayer** A common language for forest systems. A protocol that gives forest systems a shared structure.
Protocol	**AgriLayer** From crop cycle to chain of custody. A protocol connecting crop cycles, yield and provenance.
Model, in production	**Hectareo-Agri 3.8B** An agricultural language model. Already in the field, with two production deployments in Argentina.
Paper, FUTURED, 2023	**Spatial digital twins for vegetation risk in power grids** Modelling vegetation risk across power networks.

05 Signals

The work is getting *noticed.*

In science.
In industry.
In the world.

E.DSO, 2026

Predicterra and UFD, ahead of the storm.

ESA–NASA, 2026

AI foundation models for Earth observation.

Latitude Media, 2025

The intelligence behind Iberdrola's grid.

Google, 2025

Our forest digital twin at Geo for Good.

Euronews, 2025

Bizkaia prepares for a changing climate.

Corriere della Sera, 2025

Bilbao, Europe's sustainability lab.

Iberdrola, 2022

An alliance after the PERSEO challenge win.

06 Team

Small by *design*.

Our technology turns every engineer into a team.

Sebastian Priolo
Co-founder & CEO

Fernando Tadakuma
Co-founder & CDO

Federico Hasicic
CRSO

Pablo Grotto
CTO

Asier Rosa
Earth System Engineer

Unax Gómez
Design Engineer

Mariana Fernández
Earth System Engineer

Ane Mugarza
Earth System Engineer

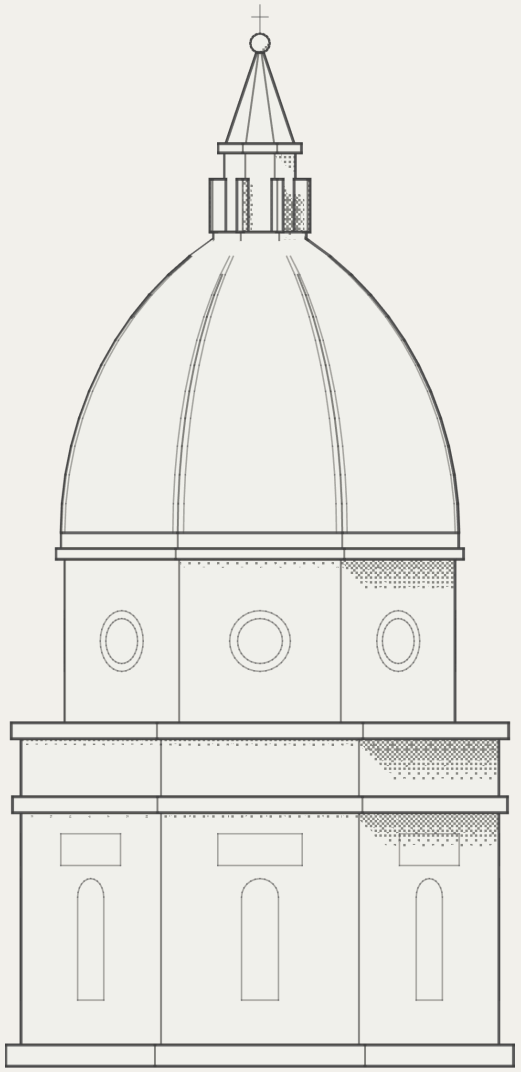

Martin Tanielian
Earth System Engineer

Federico Nery
Earth System Engineer

07 Company

We shape what *endures*.

Deployed at national scale. Recognised across industries.
Operating in Europe and the Americas.

Recognition

Iberdrola Perseo, winner

Moeve Light Up, selected

BIND 4.0, winner

Offices

Bilbao, BAT, Gran Vía 1

Donostia–San Sebastián, Parke Mikeletegi 53

08 Deploy

Build what your industry will depend on *next*.

We choose our work for what it can change.

01 Deploy

A new capability inside your operation. From applied R&D to engineering, deployment and operation.

02 Venture

A new company built on our technology. Your industry insight and capital. Our proprietary foundations.
